The Industrial Energy Accelerator envisions a future where industrial energy efficiency can be part of the climate solution, providing new employment opportunities and drastically improving productivity while reducing costs for business.

**Approach**

**Policies & Support**
- Supportive policies and improved enabling environments
- Financial incentives such as tax relief and blended finance for industrial energy efficiency investments.

**Skills & Capacity Building**
- Competent energy efficiency service providers and industry stakeholders
- Increased uptake of energy management system ISO 50001 certification.

**Financing Mechanisms**
- Access to transformative finance
- Rapid return on investment for transition to industrial EE.

**Pipeline Development**
- Champion early adopters and investors
- Awareness raising of industrial EE climate and economic benefits.

**Strategies**

**In Country Projects**

Through a series of national diagnostic assessments, the Accelerator identifies the barriers preventing industrial energy efficiency.

**The Accelerator Currently Works in Five Major Industrial Countries Responsible for around 26% of the World’s Energy Consumption**

- Indonesia
- China
- Mexico
- Brazil
- Morocco

**Theory of Change**

**Outcomes**

**Effective implementation of industrial efficiency standards and continuous improvement**
- Increased R&D, government and consumer demand for industrial energy efficiency
- Competitive and financially sustainable energy service providers

**Impacts**

**People**
- Job creation
- Poverty alleviation
- Stable energy prices
- Health & wellbeing benefits
- Improved air quality

**Economy**
- Efficient processes
- Responsible corporate image
- Better worker conditions
- Reduced maintenance
- Energy security
- Increased productivity
- Reduced operating costs

**Planet**
- Development goals
- Efficient resource management
- Climate change mitigation
- Reduced downtimes

**Efficient Utilities**
- Enhanced efficiency
- Improved resource efficiency
- Reduced energy consumption
- Reduced CO2 emissions

Help us make this invisible solution visible

As efforts to mitigate climate change become ever more critical, the Industrial Energy Accelerator is calling for policymakers and the private sector to embrace the potential of industrial energy efficiency.
